

a video analysis section for transforming at least one measurement extracted from the real-time representation of the user into an audio signal.

2. The system of claim 1, wherein [the video control system includes means for superimposing an instructional signal on the real-time representation of the user] the instructional information is at least one of a graphical video signal, an audio signal, and textual data.

a<sup>1</sup>  
3. The system of claim 1, further comprising a computer, coupled to the video control system, for generating [a] instructional [signal] information.

4. The system of claim 3, wherein the system includes a video mixer for combining the instructional [signal] information and a video signal corresponding to the real-time representation of the user.

a<sup>2</sup>  
9. The system of claim 3, wherein the computer includes means for scaling the instructional [signal] information to correspond to the determined size of the user.

10. The system of claim 3, wherein the computer includes computer instructions for analyzing the representation of the user and modifying the instructional [signal] information, in real-time, based on the analysis.

11. The system of claim [2] 1, wherein the projection device includes first and second component projection devices, the first component projection device associated with the right eye of the user and the second component projection device associated with the left eye of the user.

12. The system of claim 3, wherein the real-time representation of the user and the [superimposed] overlayed instructional [signal] information displayed on the first and second projection devices correspond to complementary images in a stereoscopic video signal.

14. The system of claim [2] 1, further including a second image projection device worn by an instructor, the second image projection device displaying the real-time representation of the user and the [superimposed] overlayed instructional [signal] information.

<sup>37</sup>  
--49. The system of claim 1, wherein in the instructional information is at least one of an audio signal or textual data. --

### REMARKS

In the Office Action the Examiner rejected claims 1-18 under 35 U.S.C. § 102(e) as being clearly anticipated by *Brostedt et al.* (U.S. Patent No. 5,984,684; hereafter Brostedt). The Applicant's respectfully traverse this rejection.

Independent claim 1, patentably distinguishes the invention from the prior art Brostedt. Claim 1 has been amended to more appropriately clarify the characteristic
